

**C.P.T.**  
*Carbide Precision Tools*

2016-17

## **Company Profile**

C.P.T.

**CPT is a leading manufacturer of high quality cutting tools.**

### PRODUCT LINE

*Thread Turning inserts and Tool holders, Mill-Thread inserts and Tool holders, Mill-Thread Solid Carbide, Spiral Mill-Thread, Grooving tools, Mini Chamfer mills and the Tiny Tools line of small boring bars for threading, turning, grooving small parts. The company's different product lines are recognised worldwide as advanced technology, reliable full range lines that offer accurate geometry, excellent cutting performances and extended tool life. CPT also produces special tools in accordance with customer's requirements.*

*In addition to our unyielding strive for high quality, speedy service and reliability, CPT is certified by ISO 9001:2008, ISO 13485:2003, ISO 14001:2004, OHSAS 18001 and soon by CE. Our products and the service we provide, live up to the highest standards and out-perform them. Most of our customers' requirements are supplied immediately from our readily available wide range of stock in Germany, as well as from our agents and distributors' stocks around the world.*

## Thread - Turning

### New HBA Grade

A new extra-fine sub-micron grade with high toughness, for optimized performance on hardened steels and cast iron up to 62HRC, titanium alloys and super alloys (hastelloy, inconel and nickel based alloys). Available for inserts sizes: 11, 16, 22, 27.

Page: 60

### Multitooth

Extended range of inserts

Page: 15

Thread Turning inserts for

### DIN 477 profile

Page: 24

### Type B

Ground Profile with Sintered Chip-breaker

- Size 11 mm inserts

Page: 10

### Quick Change

Polygon Threading Toolholders

Page: 45

## Tiny Tools

### MZL Bars - Face Grooving

Page: 95

### CMR - C.P.T. Multi-Task Tiny Tools

Page: 96

### HK - Broaching Tools for Hexagon Keys

Page: 97

### Square Shank Holders

For Swiss Type machines

Page: 100

**New Products** for MTR, MPR, MIR, MGR, MGR, MKR.

Page: 76-90

## Mini Tools

- C.P.T. presents Mini Tools, a new generation of vertical inserts and toolholders for threading, chamfering, grooving and turning, from 8 mm min. diameter.

- Steel holders are also available

Page: 105

## Swiss Line

- C.P.T. is introducing a new line of inserts and toolholders, developed for automatic lathes and Swiss Type machines.
- Designed for economic parting, grooving, profiling and chamfering mass production.

Page: 115

## Mill - Thread

### CMT - Vertical Mill - Thread

- Spiral multi flute inserts
- CMT multi inserts milling cutters

Pages: 173-197

### Mini Spiral Mill - Thread

- Spiral fluted toolholders hold 1 to 3 inserts.
- Comparatively small cutting diameters.
- Toolholders with internal coolant bore.
- Smooth cutting operation at a high feed rate.
- Reduced machining time.
- Spiral design reduces vibrations and chatter.
- High grade surface finish.

Pages: 161-170

### FMT

C.P.T. has designed a unique line of solid carbide thread milling tools FMT for increased productivity and high performance. Large number of flutes achieve significant shorter machining time.

Page: 216

### DMTH

The new DMTH tools expand the range of the existing DMT line providing the ability to cut steels, hardened materials, stainless steels and super alloys.

Page: 229

## Groove Milling

- With internal coolant through the flutes
- Same tool for Internal and External Grooving

Page: 258

## Mini Chamfer - 150°

- Optimal for deburring, back chamfering and grooving
- Double side cutting
- Spiral flutes allows smooth cutting action
- General purpose for all materials

## BLU Grade

A sub-micrograin grade with PVD triple layer coating. The BLU grade provides a combination of very high strength with high wear resistance.

## HBA Grade

An extra-fine sub-micron grade with high toughness, for optimized performance on Hardened Steels and Cast Iron up to 62HRc, Titanium Alloys and Super Alloys (Hastelloy, Inconel, and Nickel based alloys).

For **LEFT HAND** toolholders specify SIL instead of SIR

## Carbide Shank Threading Bars With coolant bore

Carbide Shank Threading Bars are used when chatter and deflection are expected due to long overhang in deep small bores.

For **LEFT HAND** toolholders specify **SEL** instead of **SER**

## Quick Change Polygon Threading Toolholders

- Polygon shank
- ISO standard (26623) compliant for toolholding systems
- Polygon taper ensures automatic radial centering and even pressure around the coupling
- Enable quick tool changes ISO standard coupling system with a 1.4 degree tapered polygon shank design
- Interchangeable with leading manufacturers

## Large Profile Range

- Pitch Range: 14mm up to 24 mm.
- Tools and inserts are offered as specials (non catalogue), because each holder has to be modified to fit the profile shape.
- Rigid Clamping

*External*

*Internal*

- Tailor made profiles according to customer's request

Available Profile	<b>Round (DIN 20400)</b>	<b>Trapez (DIN 103)</b>	<b>Acme, Stub Acme</b>	<b>American Buttress</b>
Pitch	16 mm	14-24 mm	1.0 - 1.5 TPI	1.5 - 2.0 TPI

## Thread Helix Angle

## Standard and Slanted Anvils

C.P.T. Toolholder Pockets have a built in 1.5° helix angle. This angle may be adjusted to better match the thread helix angle by simply changing the anvil.

Negative helix is usually used when threading RH thread with LH Holder or LH thread with RH Holder.

## Threading & Boring Combination Kit

A practical and convenient combination kit for **Ultra Miniature** Threading and Boring. It enables Boring and Threading of mini bores as small as **6 mm diameter (1/4")** with just one deep reaching **CARBIDE** shank ultra mini Boring Bar.

Ordering Code	Contents			
	Threading Insert	Turning Inserts	Boring Bar	Key
<b>KC6TM</b>	06 IR A60 BXC 10Pcs	06 IR TURN BMA 10Pcs	SIR 0005 H06CB	K6

**BMA** - Coated carbide grade for medium to high cutting speeds

**BXC** - Coated carbide grade for low cutting speed - 40 to 90 m/min

**CB** - Carbide shank boring bar with coolant bore

# Double Sided Thread Turning Inserts

**A unique line of 2 sided inserts including 6 cutting edges, a cost saving tool.**

## Advantages of DSI-Thread Turning Inserts

- Increased productivity thanks to the six cutting edges.
- U-Style inserts for a wide range of full or partial profile standard threads.
- Same insert for right hand or left hand thread.
- Saving on tooling costs.
- Unique anti-vibration anvil design for clamping the insert and supporting the cutting edge.
- Simple insert's mounting and cutting edge indexing.
- Heavy duty toolholders designed specially for this line.

## Carbide Grade Selection

Choose the C.P.T. grade specifically formulated for your application from the following list:

### Coated Grades

**HBA**  
(H10-H25)  
(S10-S25)

Extra-fine sub-micron grade with high toughness, for optimized performance on hardened steels and cast iron up to 62HRC, titanium alloys and super alloys (hastelloy, inconel and nickel based alloys).

**BLU**  
(M10-M20)  
(K05-K20)  
(N10-N20)  
(S10-S20)

PVD triple layer coated sub-micron grade for stainless steels, cast iron, titanium, non ferrous metals and most of the high temperature alloys.

**BMA**  
(P20-P40)  
(K20-K30)

PVD TiAlN coated sub-micrograin grade for stainless steels and exotic materials at medium to high cutting speeds.

**P25C**  
(P15-P35)

PVD TiN coated grade for treated and hard alloy steels (25 HRc & up) at medium to low cutting speeds.

**MXC**  
(K10-K20)  
(P10-P25)

PVD TiN coated micrograin for free cutting untreated alloy steels (below 30 HRc), for stainless steels and cast iron.

**BXC**  
(P30-P50)  
(K25-K40)

PVD TiN coated grade for low cutting speed. Works well with wide range of stainless steels.

### Uncoated Grades

**P30\***  
(P20-P30)

Carbide grade for carbon and cast steels, works well at medium to low cutting speeds.

**K20\***  
(K10-K30)

Carbide grade for non ferrous metals, aluminum and cast iron.

\* Upon request

**Note:** Due to our unique and specialized production techniques, C.P.T. coated inserts provide superior cutting performance and exceptionally long tool life.

### Grade availability per inserts size

Grade	HBA	BLU	BMA	P25C	MXC	BXC	P30	K20
Insert sizes	11, 16, 22, 27	11, 16, 22	06, 08, 11, 16, 22, 27, 33U,	11, 16, 22, 27, 33U	11, 16, 22, 27, 33U	06, 08	11, 16, 22, 27, 33U	06, 08, 11, 16, 22, 27, 33U
			Type-B 11, 16					

## Type B - Threading Inserts

A combination of ground profile, and sintered chip-breaker threading inserts. Unlike most other manufactures' inserts, this combination ensures a consistent high quality thread, with precise shape and dimensions. Two different unique styles of chip-breaker were designed to suit the different specific requirements of Internal threads and External threads. All of C.P.T. Type B inserts are made of BMA Sub-Micrograin grade.

## Recommended cutting speed (m/min) for thread turning inserts

ISO Standard	Material		Condition							
				HBA	BLU	BMA	P25C	MXC	BXC	K20
<b>P</b>	Non-Alloy Steel and Cast Steel, Free Cutting Steel	<0.25%C	Annealed	110-210	120-180	100-180	100-180	70-150	50-130

	Titanium Alloys		Alpha +Beta Alloys Cured	30-60	40-50	35-45			35-45	
<b>H</b>	Hardened Steel		Hardened 45-50 HRc	30-60	40-50	35-45				
			Hardened 51-55 HRc							
			Hardened 56-62 HRc							
	Chilled Cast Iron		Cast	20-50	30-40	25-35				
Cast Iron		Hardened	20-40	20-30	15-25					

## Conversion of Cutting Speed to Rotational Speed

Conversion of a selected cutting speed to rotational speed is calculated by the following formula:

*Example*

$$N = \frac{V \times 1000}{\pi \times D} = \frac{120 \times 1000}{3.14 \times 30} = 1274 \text{ RPM}$$

## Number of passes and depth of cut per pass for multitooth insert

	Pitch mm	Insert Size		No. of Teeth	Ordering Code	No. of Passes	Depth of Cut per pass			
		L	I.C. (in)				1	2	3	4
ISO External	1.00	16	3/8	3	16 ER 1.0 ISO 3M	2	0.38	0.25

## Number of threading passes selection for single point inserts

Pitch:	mm TPI	0.5 48	0.8 32	1.0 24	1.25 20	1.5 16	1.75 14	2.0 12	2.5 10	3.0 8	4.0 6	6.0 4
Number of Passes		3-6	4-7	4-9	6-10	5-11	9-12	6-13	7-15	8-17	10-20	11-22

### NOTES:

1. For most standard applications the middle of the range is a good starting point.
2. For most materials, the tougher the material, the higher the number of cutting passes you should select.
3. As a general rule of thumb, fewer passes are better than more speed.

## Thread Turning Methods

## Important Points about C.P.T. Threading Inserts

1. In most thread forms internal and external threads have different depth and radii, thus tools are not interchangeable

2. The Insert relief angle of a standard C.P.T. external toolholder is 10°; for an internal toolholder it is 15°. This 5° difference is to provide additional necessary radial clearance.

3. Our built-in relief angles ensure automatic insert flank angle clearance.

4. Profiles of C.P.T. internal & external threading inserts are precision ground to ensure accurate thread geometry when used in their corresponding toolholders. Using internal inserts with an external holder will result in distortion of angle and insert geometry.

5. Insert and toolholder should always match. An IN-RH insert must be used with an IN-RH toolholder. No mismatch is allowed.

## Flank Clearance Angle $\omega$

$$\omega = \text{ArcTan} (\text{Tan } \alpha \times \text{Tan } \phi)$$

$\phi = 10^\circ$  for External toolholders

$\phi = 15^\circ$  for Internal toolholders

## Anvil Change Recommendation

## Thread Turning - Step by Step

**Step 1 : Choose Thread Turning Method from page 63**

**Step 2 : Choose Insert**

**Step 3 : Choose Toolholder**

**Step 4 : Choose Insert Grade**

**Step 5 : Choose Thread Turning Speed**

**Step 6 : Choose Number of Threading Passes**

In most cases the above mentioned 6 steps would be the steps needed to ensure a good thread. When cutting more complicated threads such as TRAPEZ, ACME, BUTTRESS or SAGE, it is advisable to check the effect of the thread "HELIX ANGLE"  $\beta$  on the "RESULTANT FLANK CLEARANCE"  $\epsilon$ . If  $\epsilon$  is smaller than  $2^\circ$ , an anvil change is required.

**Step 7 : Find Thread Helix Angle**

**Step 8 : Choose Correct Anvil**

### EXAMPLES:

#### Example No. 1:

Step 1: Choose Thread Turning Method from page 63, we chose **EX - RH Insert & Toolholder**

Step 2: Choose Insert from page 9: **16 ER 1.5 ISO**

Step 3: Choose Toolholder from page 39: **SER 2020 K16**

Step 4: Choose Insert Grade from selection on page 60  
Our choice for Alloy Steel is Grade **P25C**

Step 5: Choose Thread Turning Speed from chart on page 61,  
we chose **100 m/min**

Rotational Speed calculation: 
$$N = \frac{100 \times 1000}{\pi \times 30} = 1065 \text{ rpm}$$

Step 6: Choose Number of Threading passes from table on page 63, we chose **8 passes**

#### Example No. 2:

Step 1: Choose Thread Turning Method from page 63  
Usually, an IN-RH Toolholder and Insert will be chosen, however, in this particular case we prefer to pull the metal chips while thread turning outward, thus we chose to work with **IN-LH Insert & Toolholder**

Step 2: Choose Insert from page 13: **16 IL 12 UN**

Step 3: Choose Toolholder from page 41: **SIL 0025 R16**  
Note: since we thread cut IN-RH thread outward with an IN-LH tool, do not forget to replace the standard anvil (supplied with the holder) with a negative anvil **AE16-1.5**

Step 4: Choose Insert Grade from selection on page 60  
Our choice for Brass is Grade **K20**

Step 5: Choose Thread Turning Speed from chart on page 61,  
we chose **150 m/min**

Rotational Speed calculation: 
$$N = \frac{150 \times 1000}{\pi \times 38.1} = 1254 \text{ RPM}$$

Step 6: Choose Number of Threading passes from table on page 63, we chose **9 passes**

## Example No. 3:

- Step 1: Choose Thread Turning Method from page 63  
We chose EX-RH Insert & Toolholder.
- Step 2: Choose Insert from page 33: **16 ER 12 ABUT**
- Step 3: Choose Toolholder from page 39: **SER 2525 M16**
- Step 4: Choose Insert Grade from selection on page 60  
Our choice for Stainless Steel is Grade **BMA**
- Step 5: Choose Thread Turning Speed from chart on page 61  
We chose 120 m/min.  
Rotational Speed calculation: 
$$N = \frac{120 \times 1000}{\pi \times 40} = 954 \text{ RPM}$$
- Step 6: Choose Number of Threading passes from table on page 63. We chose **13 passes**
- Step 7: Find Thread Helix Angle: on page 48 for Pitch of 12 TPI and 40 Diameter  
Helix Angle as shown in the chart is  $1^\circ$
- Step 8: Choose correct Anvil: As can be seen from the chart on page 65, for AMERICAN BUTTRESS Thread, for 12 TPI and 40 Diameter a negative anvil **AE16-1.5** should replace the standard anvil supplied with the toolholder

EX-RH, AMERICAN BUTTRESS  
12 TPI on 40 mm diameter.

Stainless Steel 304

Replacing the standard anvil with an anvil with negative angle will eliminate side rubbing

Anvil chosen:  
**AE16-1.5**

## Troubleshooting

### Chipping

1. Use a tougher carbide grade
2. Eliminate tool overhang
3. Check if insert is correctly clamped
4. Eliminate vibration

### Crater Wear

1. Reduce cutting speed
2. Apply coolant fluid
3. Use a harder carbide grade

### Build-up Edge

1. Increase cutting speed
2. Use a tougher carbide grade

### Thermal Cracking

1. Reduce cutting speed
2. Apply coolant fluid
3. Use a tougher carbide grade

### Deformation

1. Use a harder carbide grade
2. Reduce cutting speed
3. Reduce depth of cut
4. Apply coolant fluid

### Fracture

1. Use a tougher carbide grade
2. Reduce depth of cut
3. Index insert sooner
4. Check machine and tool stability

# Grooving Tools

## A combination of ground profile and sintered chip - breaker

### Advantages:

- Same Toolholder for Grooving and Threading
- Minimum Investment in Tooling
- Three Cutting Edges
- Precision Ground

### Contents:

### Page:

Grooving Inserts	70
Grooving Inserts for Snap Ring	70
Grooving Kits	71
Technical Section	72

## Grooving Inserts

### External & Internal

#### ER / IL

Same insert can be used for EX.RH and for IN.LH.

#### IR / EL

Same insert can be used for IN.RH and for EX.LH.

Order example: 16 ER/IL 1.20 BXC

\* The inserts should be used with our standard threading toolholders

\* The anvil must be changed to AE 16-0 or AI 16-0 before using size 16mm (3/8") inserts

\* Size 16 internal holders without anvil can't be used

## Grooving Inserts for Snap Ring

Carbide Grade: BXC

### External & Internal Partial Profile Inserts

#### ER / IL

Same insert can be used for EX.RH and for IN.LH.

#### IR / EL

Same insert can be used for IN.RH and for EX.LH.

## Technical Section

### Cutting Speeds for Grooving Tools

#### Carbide Grades:

**BXC** (P30 - P50, K25 - K40)

PVD TiN coated grade for low cutting speed. Works well with a wide range of stainless steels.

**BMA** (P20 - P40, K20 - K30)

PVD TiAlN coated sub-micrograin grade for stainless steels and exotic materials at medium to high cutting speeds.

ISO Standard	Materials	Cutting Speed m/min
<b>P</b>	Low & Medium Carbon Steel	20-100
	High Carbon Steel	30- 80
	Alloy Steels and Treated Steels	40- 90
<b>M</b>	Stainless Steels	30- 80
	Cast Steels	30- 90
<b>K</b>	Cast Iron	30- 90
<b>N</b>	Non-Ferrous and Aluminum	20-200

For grooving small bores see pages 89-95

# Tiny Tools

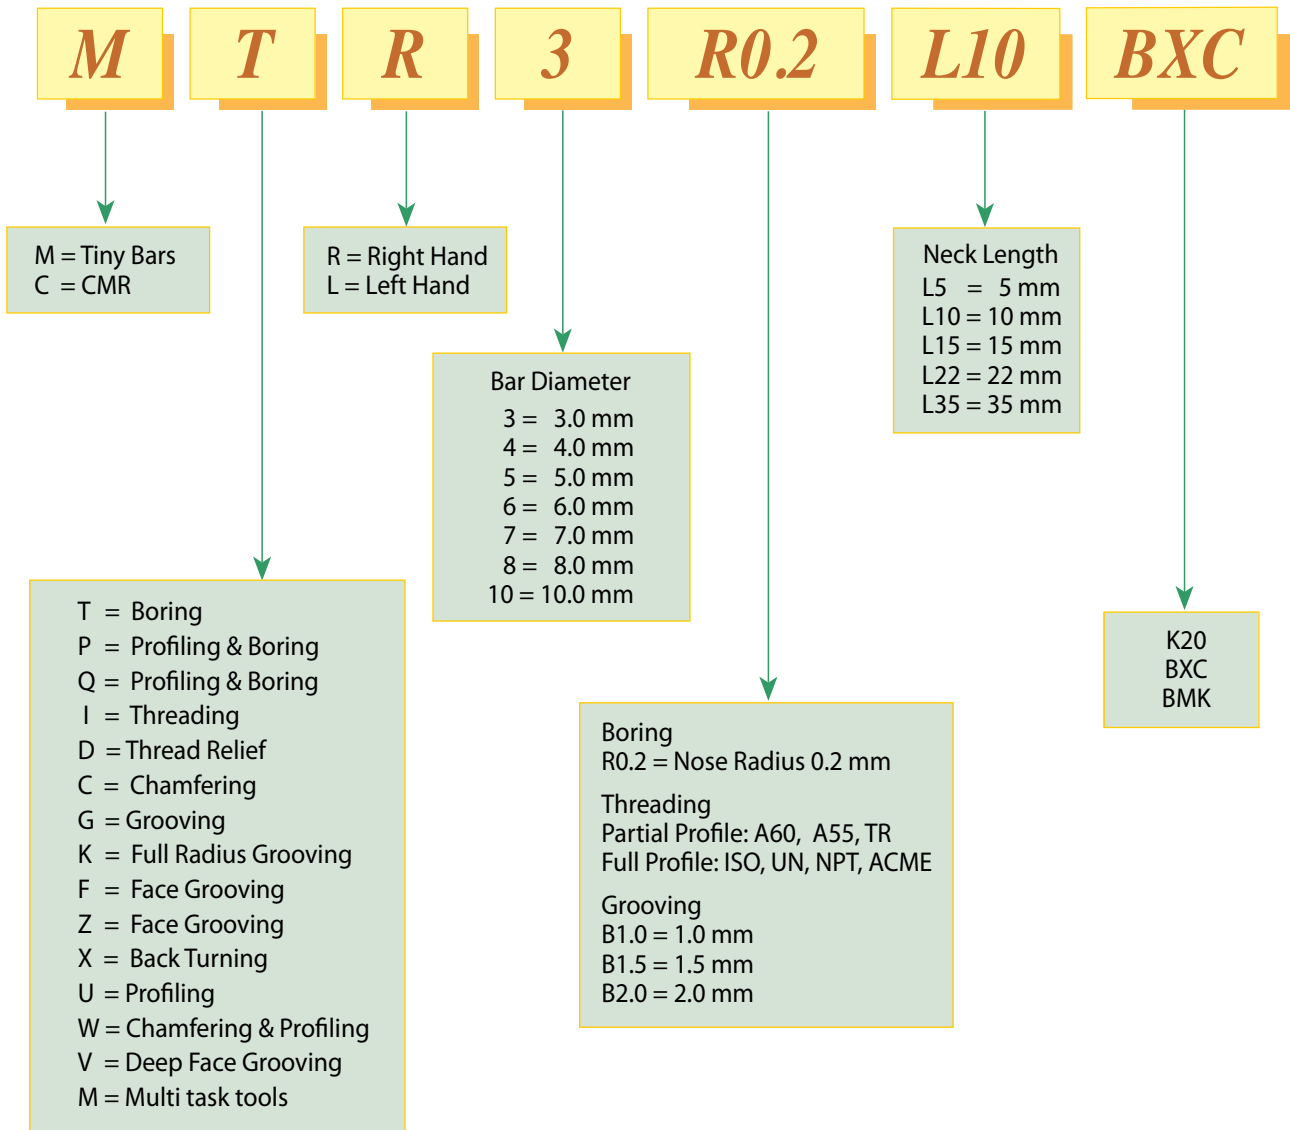

## Solid Carbide tools for working in small bores

These tools are made for the high-tech, medical and small component industry. All tools include through coolant enabling the cooling fluid to reach the cutting edge efficiently, for easy chip removal and smooth cutting operations.

Also available are kits with a 16mm or 22mm shank diameter bar holder.  
Order example: KT4-16

## Technical Section

### Carbide Grades:

#### **BXC (P30 - P50, K25 - K40)**

PVD TiN coated grade for low cutting speed.  
Works well with a wide range of stainless steels.

#### **BMK (K10 - K20)**

Sub-micron grade with advanced PVD triple coating. Extremely high heat resistant and smooth cutting operation, for high performance, and normal machining conditions. General purpose for all materials.

#### **K20 (K10 - K30)**

Uncoated Carbide grade for non ferrous metals, aluminum and cast iron.

### Cutting speed for Tiny Tools\*

ISO Standard	Material		Condition	Cutting Speed m/min		
				BXC	BMK	K20
<b>P</b>	Non-Alloy steel and cast steel, free cutting steel	<0.25%C	Annealed	25-70	30-80	15-30

Recommended Feed Rate: 0.01 - 0.03 mm/rev

## Threading Passes

Pitch:	mm TPI	0.5 48	0.7 36	0.8 32	1.0 24	1.25 20	1.5 16	2-5 14-5
Number of Passes		6-12	7-14	7-16	8-18	8-20	10-22	20-38

## CMR C.P.T. Multi-Task Tiny Tools

- C.P.T. is introducing a new and innovative Multi-Task Tiny Tool **CMR** for Boring, Turning, Facing and Chamfering with a single tool.
- The unique design enables machining of the material without the need for a pilot hole.
- The new tool shortens the machining cycle time and the number of tools required - providing **High Productivity**.
- Effective through coolant hole with a spiral flute, evacuates the chips out of the hole uninterruptedly.
- Unique chip breaker and flute design.
- To use with standard SIM toolholders on Swiss Type or CNC lathe machines.
- Available in **BMK** Grade only.

## Working Method

- The tool penetrates the work piece and produces the hole compliant with the minimum diameter the tool allows.
- The tool can penetrate the material in one pass or several passes depending on the work piece material, coolant pressure, machine power etc.
- The hole can be enlarged by multi radial passes.

The tool is equipped with an additional cutting edge, which is located across the main front edge. This allows production of an additional 45° chamfer on the work piece without the need to stop the spindle or processing operation.

## CMR Cutting Data and General Recommendations

### Coolant fluid

Dry machining should not be performed under any circumstances. It is necessary to use an internal coolant in all applications. Oil or Emulsion lubricants are recommended for best performance. In the event of low coolant pressure, adding an external coolant can improve the tool operation.

The cooling stream is designed to provide three benefits:

1. Cooling the cutting edge of the tool, and the contact area.
2. Pushing the chip away from the tool quickly, thereby reducing wear of the edge.
3. Helping to break the chip into smaller pieces and evacuating them from the cutting area.

ISO Standard	Materials	Cutting Speed m/min
<b>P</b>	Low and Medium Carbon Steels <0.55%C	20- 75
	High Carbon Steels ≥0.55%C	20- 75
	Alloy Steels, Treated Steels	20- 60
<b>M</b>	Stainless Steels - Free Cutting	20- 60
	Stainless Steels - Austenitic	20- 50
	Cast Steels	20- 70
<b>K</b>	Cast Iron	20- 90
<b>N</b>	Aluminum ≤12%Si, Copper	40-150
	Aluminum >12% Si	20-100
	Synthetics, Duroplastics, Thermoplastics	40-150
<b>S</b>	Nickel Alloys, Titanium Alloys	15- 60
<b>H</b>	Hardened Steels	

**Recommended Feed Rate: 0.01 - 0.03 mm/rev**

## HK Broaching Tools for Hexagon Keys

The HK broaching system have been developed to machine internal keyways inside blind or through holes, using CNC machines.

### Working Demo

- To use with C.P.T. standard SIM Bar Holders
- The holder can be located directly in the turret or the machine spindle
- Holder with rear clamping screw for full support during operation
- Available in **BMK** Grade only.

# Mini Tools

## Vertical Inserts and Toolholders for threading, chamfering, grooving and turning

### Advantages

**Carbide grade:**

BLU-Sub-Micron grade with advanced PVD triple layer coating delivering high heat resistance and smooth cutting operation.

- Carbide shank toolholder provides excellent vibration resistance.
- Long reach.
- Through coolant.
- For threading, grooving, boring and chamfering.
- Quick indexing.

### Typical Applications:

- Long threads or applications requiring over-hang.
- Enables production of threads with large pitch/profile.
- Threading, grooving, boring, profiling and chamfering - It's possible to offer most of the Tiny Tools profiles on the insert.

## Swiss-Line

- Swiss style lathes are becoming a popular alternative to large lathes and machining centers in many companies.
- C.P.T. is introducing Swiss line of inserts and toolholders, developed for automatic and Swiss style lathes.
- Designed for economic production of parting, grooving, profiling and chamfering.

## Advantages

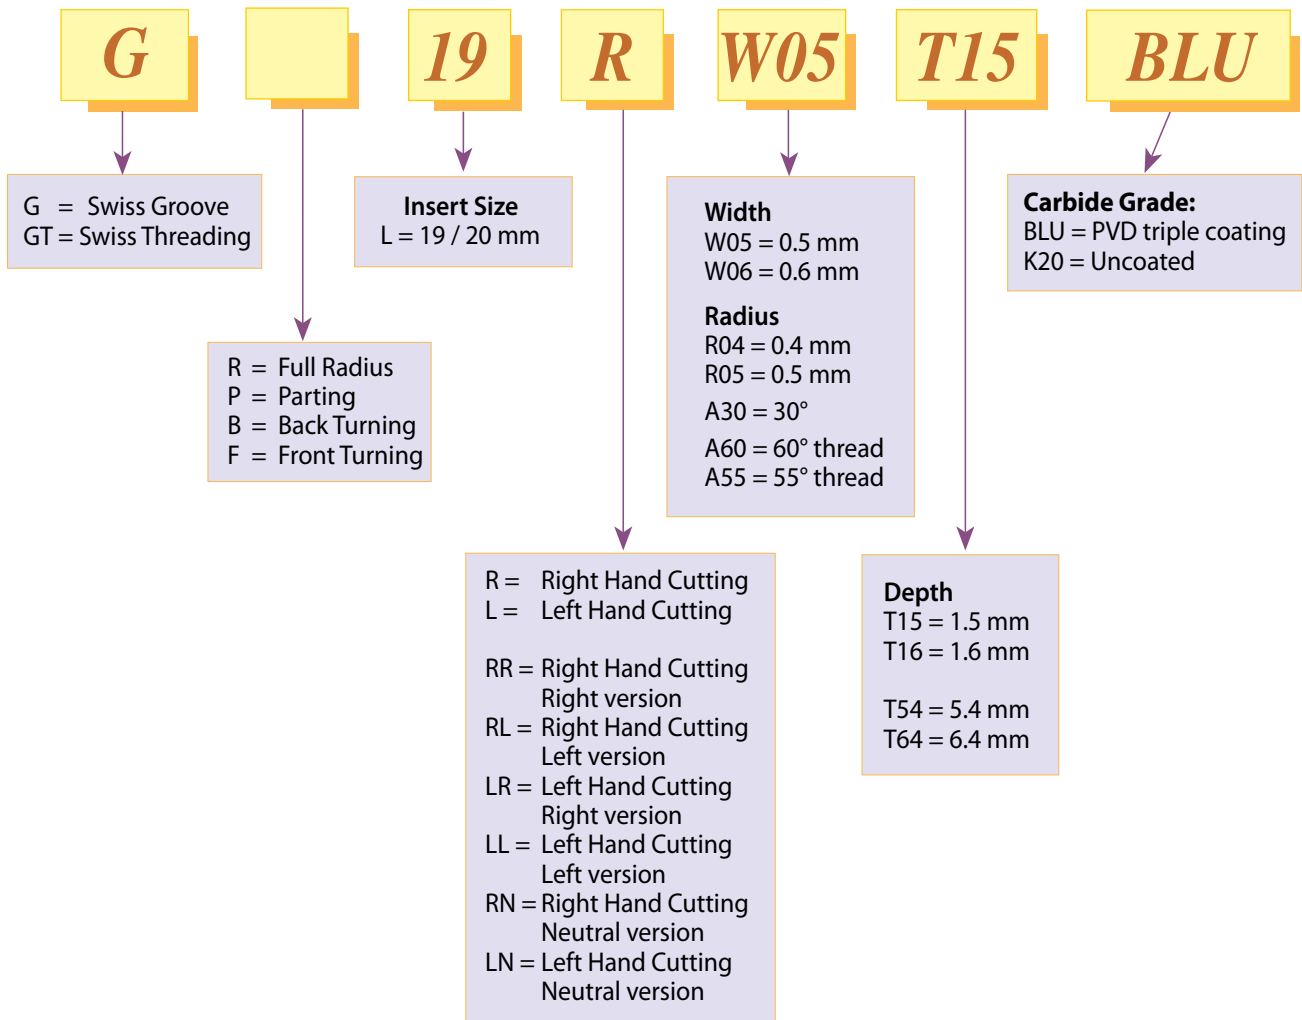

Advanced sub-micron grade (K10-K30) - a combination of strength, toughness, wear resistance and edge sharpness.

- Grounded cutting edges.
- Advanced and unique PVD triple coating, for high wear and heat resistance.
- For most types of material, including Stainless Steels, Titanium and Super Alloys.

- Three cutting edges.
- The insert can be indexed directly on the machine.
- Internal coolant to the cutting edge.

## Product Identification - Inserts

## Grooving

## Product Identification - Toolholders

## External Toolholders

- Coolant through toolholders, for external turning in Swiss style lathes.
- The high pressure coolant is directed towards the insert cutting edge in order to evacuate the chips created and avoid build up edge.
- Including a coolant connector for a quick setup on the machine.

# Thread Whirling Tools

## For Perfect Long Threads on Swiss Type Machines

Thread Whirling is a fast and accurate way to thread long, small diameter parts in exotic materials such as titanium, stainless steel and Inconel.

Whirling inserts and holders can produce a wide range of medical parts such as dental implants and bone screws, automotive parts and semiconductor small parts.

Cutting is the result of the whirling ring rotating eccentrically at high speed about the slowly rotating workpiece. The advancement of the workpiece rotationally and the advancement of the tool head longitudinally correspond to the thread pitch required.

## Thread Whirling Advantages

### **Thread Whirling offers several advantages over single point threading:**

Enabling production of small diameter long threads when used on Swiss type machines, the thread whirling spindle works close to the guide bushing for increased support and rigidity.

#### Increased Productivity:

Thread Whirling is performed in a single pass, resulting in a shorter machining time. This eliminates multiple passes required for a single point threading. Thread whirling allows working at high feed rates and consequently short cycle times.

#### Very high surface quality and accurate geometry:

The use of up to 8 cutting edges, higher concentricity, special cutting edge geometry and ideal chip removal, enable top quality surfaces to be produced without burr.

#### Long tool life:

Whirling inserts have a stronger cutting edge than single point tools, because cutter side clearance is achieved by rotating the whirling spindle, not by relieving material under the cutting edge.

#### Faster Setup:

Thread whirling eliminates special support devices and expensive startup development costs.

#### Compensation of large helix angles:

Large helix angles can be compensated by adjusting the whirling unit.

- One toolholder can be used for various applications.
- All toolholders are standard stock items.
- Inserts are made for each application as a special item.
- The toolholders are designed according to different machine types and manufacturers.
- Special adaptors for machine heads are available as stock items.

# Mill - Thread Inserts and Kits

## Mill-Thread tools for threading on CNC milling machines by using helical interpolation programs

### Advantages of Mill-Thread Tools

- Same toolholder and insert can produce both right-hand and left-hand threads.
- A single insert & toolholder can produce a given thread on many diameters (External & Internal).
- Prismatic shape of insert's tail ensures exact and reliable clamping in the toolholder.
- Most inserts are double sided, having two cutting edges.
- Thread is produced in one tool pass.
- MT tools can produce tapered threads.
- Improved productivity thanks to increased cutting speeds and multitooth type carbide inserts.
- Threading to one pitch of a shoulder in a blind hole.
- Longer tool life thanks to a special multilayer coating process.
- Lower tooling costs, considerably less expensive than using taps and dies.
- Since lower machine power is required, a smaller machine can produce larger threads in a single operation with less idle time and tool changes.

8				30- 8 NPSF	40- 8 NPSF
H	6.3	7.5	12	16	20
T	2.9	3.1	4.7	5.5	6.3

Order example: 21-14 NPSF MT7

\* One cutting edge

## PG - DIN 40430

Same Insert for External and Internal thread

Pitch TPI	Insert Size = A		
	14	21	30
18	14-18 PG (PG 9, 11, 13.5, 16)	21-18 PG (PG 16)	
16		21-16 PG (PG 21, 29, 36, 42, 48)	30-16 PG (PG 36, 42, 48)
H	7.5	12	16
T	3.1	4.7	5.6

Order example: 21-18 PG MT7

## UNJ

Inserts for External thread

Pitch TPI		Insert Size = A	
		14	21
24	Ext.	14 E 24 UNJ	21 E 24 UNJ
20	Ext.	14 E 20 UNJ	21 E 20 UNJ
18	Ext.	14 E 18 UNJ	21 E 18 UNJ
16	Ext.	14 E 16 UNJ	21 E 16 UNJ
14	Ext.	14 E 14 UNJ	21 E 14 UNJ
12	Ext.	14 E 12 UNJ	21 E 12 UNJ
H		7.5	12
T		3.1	4.7

Order example: 21E 16 UNJ MT7

For internal UNJ threads it is common to use UN inserts as partial profile.

## American Buttress

ABUT thread inserts are one-sided and may be used for both External and Internal threading

Pitch TPI	Insert Size = A		
	21	30	40
16	21 - 16 ABUT	30 - 16 ABUT	
12	21 - 12 ABUT	30 - 12 ABUT	
10	21 - 10 ABUT	30 - 10 ABUT	
8	21 - 8 ABUT	30 - 8 ABUT	
6		30 - 6 ABUT	
4		* 30 - 4 ABUT	40 - 4 ABUT
H	12	16	20
T	4.7	5.6	6.3

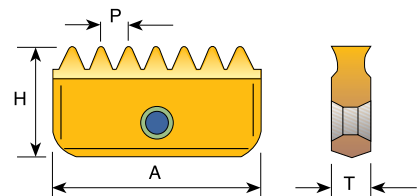

Order example: 30 - 6 ABUT MT7

\* Inserts to be used only on Multi-Insert toolholders see page 155

## ACME

Inserts for Internal threads

Pitch TPI		Insert Size = A		
		21	30	40

SR0100E40-6	40	100	32	70	6	S40	K40

Order example: SR0080D30-4

## External Multi Insert Toolholder

- Reduced machining time
- Optimal coolant supply

Ordering Code	A	D	D1	D2	L	L1	No. of Inserts	Insert Screw	Torx Key
SLE0020D21-3	21	20	22	58	65	25	3	S21	K21
SLE0030D21-3	21	30	22	68	65	25	3	S21	K21
SLE0045E21-4	21	45	27	83	70	25	4	S21	K21

Order example: SLE0030D21-3

## Long Carbide Shank Toolholders

Ordering Code	A	D	D1	D2	L	Insert Screw	Torx Key
SR0010K12C	12	9.9	8	8	125	S12	K12
SR0013H14C	14	13.2	10	10	110	S14	K14
SR0013J14C	14	13.2	10	10	155	S14	K14
SR0015K14C	14	15.2	12	12	175	S14	K14
SR0021K21C	21	21.0	16	16	130	S21	K21
SR0021M21C	21	21.0	16	16	200	S21	K21
SR0027S30C	30	27.0	20	20	270	S30	K30

Order example: SR0015K14C

For holders with long overhang reduce the cutting speed and feed rate between 20% to 40% (depends on workpiece material, pitch and overhang)

## Carbide Shank Toolholders for Single Point Threading

Ordering Code		Pitch Range		D	D1	L	Insert Screw	Torx Key
		mm	TPI					
SR0005D06C	6	0.5-1.25	48-20	6.8	5.0	63	S06	K06
SR0006H08C	8	0.5-1.75	48-14	8.8	6.0	100	S08	K08
* SR0010M11C	11	0.5-2.00	48-11	13.2	10.0	150	S11	K11

For Inserts see the Thread Turning Tools section of this catalogue

For an internal application use an internal R.H. insert.

\* For an external application use an external L.H. insert.

# D-Thread

## Mill-Thread Inserts and Toolholders for machining deep threads

- Improved productivity due to multi-insert toolholders.
- Partial Profile, standard or U-type inserts for a wide range of threads.
- Inserts with three cutting edges, reduces tooling costs.
- Low cutting resistance due to the single point inserts.
- Holder allows for a long overhang and includes internal coolant.
- Same insert and toolholder for both external and internal thread.

# Spiral Mill-Thread

## Advantages of Spiral Mill-Thread Tools

- The spiral designed tools enable a smooth cutting operation at a high feed rate and reduced machining time.
- The tools suit a wide range of applications, from machining small components in small machining centers to heavy-duty applications in high power milling machines.
- Spiral fluted toolholders hold 1 to 9 inserts in a comparatively small cutting diameter.
- The unique clamping method enables optimal indexability.
- Spiral tools reduce vibration and chatter.
- High grade finish is achieved in all applications: threading, end milling roughing and finishing.
- Inserts are available in MT7 Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials.

## Special Tools

In addition to standard products, C.P.T. manufactures special tools and inserts according to customers' requests. The toolholders are multi-purpose, making them suitable for both roughing and finishing inserts. Special tools are supplied in short delivery times.

## Case Studies

### Case Study no. 1

Thread	M56x1.5
Internal/External	Internal
Thread Length	33.0
Raw Material	Ductile Iron
Cutting Speed – Vc	130 m/min
Tooth Load – Fz	0.15 mm/tooth
Toolholder	SRH45 – 6
Insert	H45 I 1.5 ISO MT7
Result	600 pcs with 0.02 offset (Competitor – 40 pcs with 0.15 offset)

### Case Study no. 2

Application	Grooves Milling
Internal/External	External
Raw Material	Cast Steel
Cutting Speed – Vc	195 m/min
Tooth Load – Fz	0.10 mm/tooth
Toolholder	SRH63 – 9
Insert	Taylor Made H63
Result	1350 pcs (Competitor – 540 pcs)

## C.P.T. presents a modular line of Mill-Thread toolholders

- C.P.T. modular holders are ideal for deep reach applications.
- Unique clamping method enables optimal strength and indexability.
- Cost saving - Same shank can hold different heads.
- Toolholders with internal coolant bore.
- Screw connection allows long overhang.
- C.P.T. standard thread milling inserts fit these toolholders.
- Different steel extensions are available.
- Toolholders are compatible with common toolholding systems.

# CMT Vertical Mill-Thread

**Vertical milling indexable inserts and toolholders to perform a wide variety of threads, grooves, chamfers and more.**

## Advantages of CMT - Vertical Mill-Thread

- Ground profile inserts for high precision and excellent performance.
- Working at high machining parameters, with high surface quality.
- Solid and accurate clamping method enables full repeatability.
- Same insert for right-hand or left-hand threads.
- Toolholders include weldon shank and coolant bore.
- Chamfer inserts are also available.

Toolholders without Weldon

## CMT Multi Insert Milling Cutters

C.P.T. presents a new generation of CMT indexable milling inserts and cutters for Grooving, Chamfering and Threading

### Inserts

- Insert profiles are fully ground
- Spiral inserts for smooth cutting operation
- Three cutting edges on each insert
- For a wide range of materials and applications

Carbide grade: MT7

### Milling cutters / Disc milling cutter

- 4 - 8 inserts per holder, for high productivity
- To use with C.P.T. standard CMT - S35 toolholders
- The milling cutters are coated with a special layer (silver color) for high Anti-corrosive resistance and extra protection against cutting burrs

## Product Identification - Ordering Codes

H22	<b>SRI 41- I16</b>	SI16	41	33.2	3.6	12.5	12.0	S16S	K16

Right hand cutting

To connect to the standard CMT toolholders S35: SRC 2535 H, SRC 2535 K, CRC 2035 S

### Milling Cutter- Weldon Shank

Tool No.	Ordering Code	Insert type	D	d	T max	B	S	L	Insert Screw	Torx Key
H23	<b>SRI 2541-I16</b>	SI16	41	25	3.6	12.5	12.0	125	S16S	K16

Right hand cutting

## Mill Cutter - Disc Milling

Tool No.	Ordering Code	Insert type	D	T max	B	S	Insert Screw	Torx Key
H24	<b>SRI 55-I16</b>	SI16	55	15.5	8.2	7.2	S16M	K16

Right hand cutting

To use only with inserts SG 16 R W43, and SG 16 L W43

To connect to the standard CMT toolholders S35: SRC 2535 H, SRC 2535 K, CRC 2035 S

# Mill-Thread Solid Carbide

## Advantages of Mill-Thread Solid Carbide

- Thread is generated in one pass.
- Spiral flutes allow smooth cutting action.
- Shorter machining time due to multi, 3 to 6, flutes.
- 2.2 mm and up cutting diameter.
- Threads up to shoulder in blind hole.
- Longer tool life due to special multi-layer coating.
- Same tool can be used for a variety of materials.
- Excellent surface finish.
- Low cutting pressure allows thin wall machining.
- Same tool used for R.H and L.H. threads.

**MT** - Thread Mills without internal coolant

**MTB** - Thread Mills with internal coolant bore for blind holes

**MTZ** - Thread Mills with internal coolant through the flutes

**MTQ** - Thread Mills that include relieved neck for deep work pieces

**FMT** - Fast Thread Mills with internal coolant bore

Order example: MTZ 1010D16 18 NPTF MT7

For conical preparation end mills see page 221

## Solid Carbide Tapered End Mills

Solid carbide tapered end mills are used for milling preparation of conical threads before the thread milling operation.

### Advantages:

- \* Increases the tool life of mill thread cutters and indexable inserts.
- \* Equal and uniform load along the cutting edge of the mill thread cutter.
- \* Shorter machining time during the mill thread operation, due to the tapered preparation.
- \* Same tool for internal and external preparation.

# Mini Mill-Thread

## MTS

- Threading from ISO M1 x 0.25 and 0-80UN.
- Working in high cutting speed.
- Short machining time.
- Low cutting forces thanks to the short profile.
- No broken taps.
- Machining of hardened materials up to 45 HRc.

## Advantages

- Enables machining in deep holes.
- Same tool can produce a wide range of threads and pitches.
- Same tool can produce both External and Internal threads.

## Carbide grade: MT7

Sub-Micron grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). To be run at medium to high cutting speeds. General purpose for all materials.

- Coolant through the flutes is very effective for deep holes.
- Spiral flutes allow smooth cutting action.
- Shorter machining time due to multi (3 to 5) flutes.
- Longer tool life due to special triple coating.

## MTI - For threading deep parts

**Carbide grade: MT8** Sub-micron grade with advanced PVD triple coating (ISO K10-K20). Extremely high heat resistant and smooth cutting operation, for high performance, and normal machining conditions. General purpose for all materials.

**MT11** Ultra-fine Sub-micron grade with advanced PVD triple blue coating.

# DMT 3 in 1 - \*Drill, Thread, Chamfer

**High Performance tools with internal coolant supply for the production of internal threads.  
\*Circular movement produces the thread hole, the thread and a chamfer  
in one work process.**

**Carbide grade:** MT7 Sub-micron grade with Titanium Aluminum Nitride multi-layer coating (ISO K10-K20).  
MT11 Ultra - fine Sub-micron grade with advanced PVD triple Blue coating (for DMTH)

## Advantages of DMT

- Cancels the need for drilling the hole.
- Short cycle time and high performance reduces machining costs.
- Suitable for blind and through holes.
- Full Profile thread.
- No time lost for tool change, since drilling, chamfering and thread milling are done with one tool.
- Same tool for right-hand or left-hand threads.
- Cuts a wide range of materials.

### MTSH Type

C.P.T. are pioneers in offering solid carbide thread mills designed specifically for the machining of hardened materials up to 62HRc. These tools provide high performance, improved cut and an excellent surface finish.

#### HARDCUT MTSH & MTH Types

**Carbide grade: MT9 / MT11** - Ultra fine sub-micron grade with Advanced PVD Triple Coating

### MTH Type

C.P.T. provide innovative mill thread solid carbide tools for machining:

- Hardened steels and cast iron up to 62 HRc.
- High temperature alloys.
- Titanium alloys.
- Super Alloys (Hastelloy, Inconel, Nickel Base Alloys).

- Threading from ISO M1.4 x 0.3 and 0-80UN
- Perfect solution for the Die and Mold industry
- Working at high cutting speeds
- Short machining time
- Low cutting forces thanks to the short profile

#### Advantages

- Same tool performs thread milling and chamfering - saves machining time.
- Increased cutting diameter - better rigidity and stability.
- Coating provides high wear and heat resistance.
- Ultra fine grade - dedicated for hardened materials.
- Short chips are produced, insure high process security.
- Short cycle time - increases productivity.
- Thread length up to 2xD.

## Conversion of Cutting Speed to Rotational Speed

Conversion of selected cutting speed to rotational speed is calculated by the following formula:

$$N = \frac{V \times 1000}{\pi \times D} = \frac{120 \times 1000}{3.14 \times 30} = 1274 \text{ RPM}$$

**Example:**  $V=120 \text{ m/min}$   
 $D=30 \text{ mm}$

D=Cutting diameter

### Internal Thread

### External Thread

## Tool Selection

For indexable and solid carbide Mill Threads

The following chart provides a fairly accurate visual selection tool for Internal Threading. The chart is suitable for the following thread forms: ISO, UN, WHIT, NPT, NPTF, BSPT and PG.

Any tool with a small cutting diameter can produce larger diameter threads.

**Example:** Internal thread M30 x 1.5:

Find a Milling Tool to produce d=30 Internal right hand ISO thread with a thread pitch P=1.5 mm. As can be seen from the chart above, the two red lines intersect at a selected tool with a cutting diameter of D=21 mm

Chosen toolholder: SR0021 H21

Insert: 21 I 1.5 ISO MT7

If you need assistance, please call your local distributor and ask for help in selecting the appropriate tool as well as for a CNC program to suit your CNC milling machine.

## C.P.T. Mill-Thread catalogue and CNC programming Software

This software is provided by C.P.T. to assist you, the threadmilling user, to select and apply the correct tool to machine threads on CNC machining centers. The program will find tools and inserts which are suitable for your application, calculate cutting data and generate a CNC program for a variety of controls.

The software is available at our web site: [www.cpt-gewindewerkzeuge.de](http://www.cpt-gewindewerkzeuge.de)

## Example of Thread Milling CNC Program for Internal Threading

Right hand thread (climb milling) from bottom up.

Program is based on tool center.

This method of programming needs no tool radius compensation value other than an offset for wear.

$A = \frac{D_o - D}{2}$	<p>A = Radius of tool path                  D<sub>o</sub> = Major thread dia.                  D = Cutting dia.</p>

## Mill-Thread Inserts Speed and Feed Selection

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

ISO	Materials	Cutting Speed m/min MT7
<b>P</b>	Low and Medium Carbon Steels	115 - 280
	High Carbon Steels	130 - 200
	Alloy Steels, Treated Steels	105 - 180
<b>M</b>	Stainless Steels	130 - 190
	Cast Steels	150 - 190
<b>K</b>	Cast Iron	80 - 70
<b>N</b>	Non-Ferrous & Aluminum	180 - 340
	Synthetics, Duroplastics, Thermoplastics	115 - 460
<b>S</b>	Nickel Alloys, Titanium Alloys	25 - 90

**Recommended FEED RATE: 0.05 - 0.15 mm**

## Spiral Mill-Thread Inserts Speed and Feed Selection

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

ISO	Materials	Cutting Speed m/min MT7
<b>P</b>	Low and Medium Carbon Steels	145 - 360
	High Carbon Steels	165 - 255
	Alloy Steels, Treated Steels	135 - 230
<b>M</b>	Stainless Steels	165 - 245
	Cast Steels	190 - 245
<b>K</b>	Cast Iron	100 - 220
<b>N</b>	Non-Ferrous & Aluminum	230 - 440
	Synthetics, Duroplastics, Thermoplastics	145 - 590
<b>S</b>	Nickel Alloys, Titanium Alloys	30 - 115

**Recommended FEED RATE: 0.05 - 0.15 mm**

As you may note, cutting speed is shown in range terms. In most standard cases choosing a speed in the middle of the range would be a good choice for a start.

For hard metals reduce cutting speed.

## Spiral Finish Speed Selection

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

ISO	Materials	Cutting Speed (m/min)
<b>P</b>	Low and Medium Carbon Steels	200 - 330
	High Carbon Steels	170 - 235
	Alloy Steels, Treated Steels	100 - 195
<b>M</b>	Stainless Steels	180 - 230
	Cast Steels	180 - 230
<b>K</b>	Cast Iron	200 - 350
<b>N</b>	Non-Ferrous and Aluminum	500 - 1100
	Synthetics, Duroplastics, Thermoplastics	400 - 1500
<b>S</b>	Nickel Alloys, Titanium Alloys	30 - 55

## Cutting Data

### D-Thread type

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

ISO	Materials	Cutting Speed (m/min)
<b>P</b>	Low and Medium Carbon Steels <0.55%C	100-205
	High Carbon Steels ≥0.55%C	100-180
	Alloy Steels, Treated Steels	100-140
<b>M</b>	Stainless Steels - Free Cutting	85-125
	Stainless Steels - Austenitic	80-115
	Cast Steels	115-155
<b>K</b>	Cast Iron	75-145
<b>N</b>	Aluminum ≤12%Si, Copper	150-300
	Aluminum >12% Si	150-300
	Synthetics, Duroplastics, Thermoplastics	100-350
<b>S</b>	Nickel Alloys, Titanium Alloys	45- 95

**Recommended FEED RATE: 0.07 - 0.15 mm**

For cutters with long cutting length reduce feed rate by 40%

## MTQ type

**Thread mills with relieved neck and internal coolant for milling medium and large threads on relatively deep work pieces.**

Carbide grade: MT7

- To produce medium and large threads on relatively deep work pieces.
- To use overhang according to the application.
- To perform deep threads at the bottom of the application.

### Advantages

- Provides high rigidity and stability (anti-vibration).
- Accomplishes deep threads in one pass.
- Relatively low cutting forces due to short cutting length.
- Threads length up to 3D.

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

ISO	Materials	Cutting Speed m/min	Feed mm/tooth Cutting Diameter=D

<b>S</b>	Nickel Alloys, Titanium Alloys	20 - 80	0.02	0.02	0.02	0.03	0.03	0.03

## FMT Fast MT

- C.P.T. has designed a unique line of solid carbide thread milling tools FMT for increased productivity and high performance.
- Large number of flutes enables to achieve significant shorter machining time.

## FMT vs. Taps

Features	FMT	Taps
Thread up to bottom at blind hole	Possible	Not possible
Machining load	Very low	High
Thread surface quality	High	Medium
Process reliability	Very reliable, especially for expensive work pieces	Medium
Thread geometry	Very accurate	Medium
Cycle time	Same or faster than tap	Fast

**MT8** Sub Micron grade with advanced PVD triple coating (ISO K10-K20). Extremely high heat resistant and smooth cutting operation, for high performance and normal machining conditions. General purpose for all materials.

## Test Report

### Application

Internal right hand thread: M6x1.0  
 Thread length: 10 mm, Blind hole  
 Bore size: Ø 5 mm  
 Chamfer: 0.9 mm

### Work piece material

Steel SAE 4340

### Cutter description

FMT08048F10 1.0 ISO- with internal coolant  
 Shank diameter: Ø8 mm  
 Cutting diameter: Ø4.8 mm  
 Number of flutes: 6  
 Cutting length: 10.5 mm  
 Total length: 64 mm

### Cutting conditions

Cutting speed: 130 m/min Feed: 0.016 mm/tooth

### Machine

Mori Seiki NV5000 Coolant: emulsion 5%

### Results

Tool life : 2,170 threads  
 Cycle time: 1.5 sec

## Mini Mill-Thread vs. Taps

Features	Mini Mill-Thread	Taps
Thread surface quality	High	Medium
Thread geometry	Very accurate	Medium
Thread tolerances	4H, 5H, 6H with std cutter	6H with standard tap, 4H with specific tap
Machining time	Same as tap or shorter	Short
Tool breakage	Almost not possible	Could happen often
Machining load	Very low	High
Range of thread diameters	Wide range of diameters	Specific tap for each diameter
Right/Left hand threading	Same cutter	Specific tap for each
Geometric shape	Full profile	Partial profile

## DMT type

**MT7** Sub-Micron Grade with Titanium Aluminum Nitride multi-layer coating (ISO K10 - K20). This is a general purpose grade, which can be used with all materials; it should be run at medium to high cutting speeds.

# Solid Carbide Grooving Tools

## For Grooving Deep Parts

### Advantages

**Carbide grade: MT8** Sub-micron grade with advanced PVD triple coating (ISO K10-K20). Extremely high heat resistant and smooth cutting operation. For high performance and normal machining conditions. General purpose for all materials.

- Enables machining in deep holes
- Coolant through the flutes is very effective for deep holes.
- Spiral flutes allow smooth cutting action.
- Longer tool life due to special multi-layer coating.
- Shorter machining time due to multi (3 to 5) flutes.

# Mini Chamfer

## Advantages

**Carbide grade: MT8** Sub-micron grade with advanced PVD triple coating (ISO K10-K20). Extremely high heat resistant and smooth cutting operation, for high performance, and normal machining conditions. General purpose for all materials.

- Optimal for deburring, back chamfering and grooving.
- Double side cutting.
- Spiral flute allows smooth cutting action.
